Missouri, Columbia, MO 65211, USA
If you are interested in getting corresponding physical clones,
If you are interested in getting corresponding physical clones,
these are publicly available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org; ZmDB, www.zmdb.lastate.edu; TIGR,
www.ligr.org; or NNEI, www.ncbi.nlm.nih.gov. When the source of the
maize CDNA sequences is either Virginia Malbot, Stanford or Pat
Schnable, lowa State, then clones may be requested from ZmDB:
www.zmdb.lastate.edu.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae; PACCAD clade; Panicoldeae; Andropogoneae; Zea.

/note="Vector: Bluescript SK+/Xhol-EcoRI; Site 1: EcoRI; Site 2: Xhol; Field-grown corn was silk channeI-inoculated in the morning (~10 am) with 1 ml of a macroconidial suspension (500,000 spores/ml) of Fusarium graminearum and silk channels were collected and immediately frozen in liquid nitrogen 6 hours later. RNA was extracted from silk tissue between 1 cm below and above the inoculation point in the silk channel, RNA from five silk channels was pooled."

6.1; Site=1: BCORY; Site=2: Not1; Maize Gene Discovery
Froject contracted with Invitrogen to produce a
normalized, full length library in a pSport vector. This
is a Gateway compatible vector, permitting clone movement
to new vector backbones for expression in diverse host
to new vector backbones for expression in diverse host
cells using recombination rather than restriction enzymes.
Details of the vector and sequencing primers are available
at ZmDB in the EST library description tables. poly(A)+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CO524416

mRNA was prepared by Invitrogen, and equimolar amounts of RNA from each of the 12 tissue samples were mixed together for selection of mRNA with a 5. cap. After synthesis of CDNA, a normalization step was conducted against the mixture of RNA sources. This step effected a 20X to 80X reduction in common transcript types. Tissues prepared: 1. just emerging silks; 2. inner husks from ears of sample #1; 3. 20 dap aleurone; 4. immature tassels, stages from 1-2 mm to 1-2 cm, 5. 2 mm to 2 cm ears; 6. pollen; 7..1 cm vegetative shoot tips from 15 day old seedlings; all leaves with an expanded or partially expanded sheath were removed; 8. mature leaf tissue; 9. 0.5 cm long root tips from 15 day old seedlings; 10. 10 dap whole seed; 11. 2 dap endosperm and embryo. All of the sequenced clones in project 3530 will be archived at the University of Arizona along with the Unigene clones from the Maize Gene Discovery Ext sequencing projects. Clones can be ordered through the ZmDB web site or directly from the University of Arizona (http://www.genome.arizona.edu/orders/). High density filters containing over 18,1000 clones can also be ordered from the University of Arizona.

At 8 days of age, growth medium was supplemented with hydrogen peroxide to 0.003% and leaves were misted with 10 um methyl viologen. Leaves and roots were harvested at 3, 12 and 27 hr after treatment and all tissue pooled. Double-stranded cDNA was cloned unidirectionally into different DralII sites of the pWE188-FL3 vector (5-prime DralII site is GACTGTGG, 3-prime_DralII site is CACTGTGG).

fincte-"vector: pUC19; Site 1: ECORI; Site 2: ECORI; The library was prepared by George Rudenko using poly (A) elected RNA and Universal Ribochone CDNA Synthesis System (Promes). CDNA was synthesized using both random and oligo(dT) primers in separate reactions and equipped with ECORI adaptors. Library was size-fractionated on agarose gels (for insert size >400bp) and non-directionally cloned into ECORI-digested pUC19 vector. Blue/white selection on carbenicillin-containing plates was used to recover 228 169 PheAspGlyLeuGlyAspProGlyArgValAlaArgAspAlaValValAlaPheLysAla 188 208 536 Bukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnoliophyta, Liliopsida, Poales, Poaceae, PACCAD clade, Panicoideae, Andropogoneae, Zea.
